

CLEARAUTH AI

Onboarding Cost & ROI Model

Client Planning Reference

Core pricing assumption **\$50 is treated as the implementation labor rate per onboarding hour - not as a charge per prior authorization.** The provided benchmark indicates a manual administrative cost of approximately \$20-\$30 per PA, so a \$50-per-PA charge would be difficult to justify.

Pricing principle

Price onboarding primarily by integration complexity, not physician count. EHR connectivity, payer routes, n8n workflows, security, portal automation, testing and go-live are largely practice-level activities. Adding physicians mainly increases provider/NPI/EHR mapping effort.

\$3,000-\$3,500 Standard onboarding	53.5 hrs 10-physician effort	\$12K-\$19.7K/mo Conservative savings	~5-8 days Indicative payback
---	--	---	--

Client requirement alignment

ClearAuth receives patient/insurance/CPT/diagnosis/order data, checks electronically first, uses payer/clearinghouse or portal integrations, gathers clinical documents, and routes only exceptions to humans. The onboarding model therefore focuses on configuring those shared integration capabilities once per practice.

Important unit distinction **Practice onboarding is a one-time implementation activity.** Each prior authorization is a separate operational transaction/case that reuses the already-configured EHR, payer and portal integrations.

01 Recommended onboarding formula

The formula below is the direct operating model for a supported practice.

Onboarding Hours	$34 + (0.25 \times \text{Physicians}) + (3 \times \text{Electronic Payer Routes}) + (4 \times \text{Portal Routes})$
-------------------------	--

The fixed 34 hours covers common onboarding work:

Onboarding activity	Hours
Discovery + access readiness	4
Practice/tenant/security setup	4
EHR integration + data mapping	10
n8n/HITL workflow configuration	4
End-to-end UAT	6
User/admin training	2
Go-live + initial hypercare	4
Base hours	34

Variable effort

- **0.25 hour per physician** for provider/NPI/EHR mapping
- **3 hours per electronic payer/clearinghouse route**
- **4 hours per payer portal** requiring browser configuration/validation

Onboarding Cost	$\text{Onboarding Hours} \times \\$50/\text{hour}$
------------------------	--

Implementation contingency: Add 15% for credential issues, EHR field differences, test-data problems, payer portal changes and other onboarding uncertainty.

10-physician example

Assumptions: 10 physicians, 1 already-supported EHR, 3 electronic payer/clearinghouse routes, and 2 payer portals requiring browser fallback.

Calculation component	Formula	Hours
Base onboarding	Fixed	34.0
Physician mapping	10×0.25	2.5
Electronic payer setup	3×3	9.0
Portal setup	2×4	8.0
Total onboarding effort		53.5

Cost calculation	$53.5 \text{ hours} \times \\$50 = \\$2,675$ With 15% contingency: $\\$2,675 \times 1.15 = \\$3,076$
-------------------------	---

Recommendation	ClearAuth Standard Onboarding: \$3,000-\$3,500 one time for a normal 10-physician practice with an already-supported EHR.
-----------------------	--

02 Customer burden and automation value

Illustrative economics using the provided PA-volume and manual-cost assumptions.

Provided benchmark assumptions

Metric	Assumption
PA volume per physician	160-175 PAs/month
10-physician PA volume	1,600-1,750 PAs/month
Manual administrative cost	\$20-\$30 per PA
Automation handling-time reduction	~75% (20+ minutes to under 5 minutes)
Conservative realization factor	50% of theoretical value

Current PA administrative burden

Scenario	Calculation	Monthly burden
Low	1,600 x \$20	\$32,000
High	1,750 x \$30	\$52,500

Current PA administrative burden **\$32,000-\$52,500 per month**

Theoretical automation value

Scenario	Calculation	Monthly value
Low	\$32,000 x 75%	\$24,000
High	\$52,500 x 75%	\$39,375

Theoretical gross savings opportunity **\$24,000-\$39,375 per month**

Commercial modeling recommendation: Do not sell using the entire theoretical value. Some cases still require human intervention, peer-to-peer review, missing-document resolution, portal exception handling, or other clinical/administrative work. Use a conservative 50% realization factor initially.

Estimated practical savings **\$12,000-\$19,688 per month**

Indicative onboarding payback

Savings case	Payback calculation	Approx. payback
\$12,000/month	$\$3,100 / \$12,000 = 0.258$ months	7-8 days
\$19,688/month	$\$3,100 / \$19,688 = 0.157$ months	~5 days

Indicative result Under the conservative model, a 10-physician practice could recover the one-time ClearAuth onboarding investment in **approximately one week** of operational savings.

Note: Payback excludes recurring ClearAuth subscription fees, API/clearinghouse fees, browser/voice costs, and ongoing support costs.

03 Scale comparison and commercial model

Onboarding effort grows slowly when the EHR and payer integrations are reusable; value grows with PA volume.

Practice	Monthly PA volume	Current manual burden	Conservative monthly savings	Approx. onboarding
10 physicians	1,600-1,750	\$32K-\$52.5K	\$12K-\$19.7K	~\$3.1K
25 physicians	4,000-4,375	\$80K-\$131.3K	\$30K-\$49.2K	~\$3.3K*
50 physicians	8,000-8,750	\$160K-\$262.5K	\$60K-\$98.4K	~\$3.7K*

*Assumes the same EHR and approximately the same number of payer integrations. More payer routes, locations, portal variants, or custom workflows increase onboarding effort.

Commercial point **Onboarding cost grows slowly, while customer value grows almost linearly with PA volume.** Therefore, standard onboarding should not be priced primarily per physician.

One-time standard onboarding

Recommended range **\$3,000-\$3,500**

Includes

- Practice setup
- Doctor mapping
- EHR configuration
- Payer route configuration
- n8n setup
- Portal configuration
- HITL setup
- UAT
- Training
- Go-live

Net-new integration charges

Do not absorb custom integration development into the standard onboarding price.

Additional work	Suggested @ \$50/hr
New EHR integration	\$1,000-\$2,000
New electronic payer integration	\$400-\$800
New payer portal automation	\$400-\$800
Voice payer workflow	\$400-\$1,000
Additional complex location/workflow	\$200-\$400

Once a connector becomes reusable, later customers should not incur the full original development cost.

04 Business-plan formulas and recommended commercial position

A concise set of formulas to keep pricing consistent across future practices.

Onboarding formula

H = 34 + 0.25P + 3E + 4B + N	P = physicians E = electronic payer connections B = browser/portal payer connections N = net-new integration/customization hours
Onboarding Cost	H x \$50
Quoted Onboarding Price	Onboarding Cost x 1.15

Customer-savings formula

Monthly Manual Cost	Monthly PA Volume x Manual Cost per PA
Theoretical Automation Value	Monthly Manual Cost x Automation Reduction
Expected Monthly Savings	PA Volume x \$20-\$30 x 75% x 50%

For the 10-physician example: 1,600-1,750 x \$20-\$30 x 0.75 x 0.50 = approximately **\$12,000-\$19,688/month**.

Recommended commercial position

Standard ClearAuth Onboarding: \$3,000	Includes 1 practice, up to 10 physicians, one supported EHR, up to three supported electronic payer routes, two payer portal configurations, HITL workflow, training and go-live.
Custom integration policy	Net-new EHR or payer integrations are estimated separately at \$50/hour.

Client-facing ROI message

Your practice currently processes approximately 1,600-1,750 prior authorizations every month. At the stated \$20-\$30 administrative burden per authorization, that represents \$32K-\$52.5K of monthly burden. A one-time ~\$3K ClearAuth onboarding investment is small relative to even a conservative \$12K-\$20K/month automation opportunity.

Model notes

- This document is a planning model based on the volume and cost assumptions provided in the source materials.
- Savings are illustrative and should be validated against each practice's actual PA volume, staffing cost, payer mix, exception rate, and automation coverage.
- Standard onboarding assumes a supported EHR and reusable payer integrations. Net-new integrations are priced separately.
